

Sprint Review — [Sprint Tasks 1]

Sprint goals

Name of goal

- Give the customer order pickup times
- Set limits on orders
- Be able to track orders
- Allow the restaurant to run promotions
- Allow the customer to leave notes on orders for special instructions

Demos

Demo	Feedback
Customer can see their order progress and track it	How in depth will the progress of the order be? Will they get an alert when their order is ready?
Tracks current and completed orders and places a limit based on current staff available	What will the limit be based on the number of staff members?
Restaurant can run promotions with discount codes	Are multiple promotions able to be run at once? Is the restaurant able to choose how long they want the promotion to last?
Customer will be given a pickup time for their order	How accurate is this? Will each menu item have a different time associated with it or is it just a general estimate regardless of food.
Added a notes system that lets the customer leave special instructions on their order for their food	How noticeable are the notes for the customers? Is it possible for the staff to miss them, and if the notes have dietary restrictions it could be a problem

Complete tasks

Get Time of order {DONE}

Estimate time to prep order {DONE}

Estimate pickup time {DONE}

Keep track of how many are placed {DONE}
Set a limit based on staff {DONE}
